Education

California State University, San Bernardino

Bachelor of Science in Computer Science

San Bernardino, California

Graduated: May 2026

Technical Skills

Languages: SQL, Python, Typescript, Javascript, C++

Tools: Git, GitHub, Docker

Technologies & Frameworks: PostgreSQL, MySQL, FastAPI, Flask, Firebase, Firestore, Docker, Kubernetes, REST APIs,

Certifications: Computer Science AS, Computer Information Systems AS, Computer Programming CA

Experience

Full Stack Intern

Jan 2026 - April 2026

RideSplits

San Bernardino California

- Delivered a production-ready Reddit-style FAQ platform in a 5-day sprint, independently owning architecture, development, testing, and deployment.
- Designed a normalized Firestore database supporting users, questions, answers, voting, moderation, and role-based permissions, enabling scalable community management.
- Implemented Firebase Authentication and Firestore security rules to enforce server-side access controls and prevent unauthorized API access.
- Built real-time data tracking pipelines using Firestore, reducing reporting latency by approximately 100 ms.
- Developed internal operational dashboards and reporting tools that improved visibility into ride activity, customer feedback, and platform performance.

Radio Frequency Engineer

March 2026 - Present

Scarlet Wireless

Los Angeles California

- Collected and validated wireless network performance data across multiple geographic test regions using automated RF testing platforms.
- Analyzed throughput, latency, signal strength, and handoff performance data to identify network quality trends.
- Processed and transformed large CSV-based datasets into structured reporting formats for engineering analysis.
- Generated performance reports used by engineering stakeholders to evaluate network coverage and optimization opportunities.
- Executed automated testing workflows that produced high-volume datasets while maintaining data integrity and reporting accuracy.

Projects

Market Analytics API - Real-Time VWAP Engine

[csusb-denny/MarketMotionInsights](#)

- Built a FastAPI-based market analytics service that computes real-time VWAP metrics from live financial market data streams.
- Engineered modular service layers for Data Ingestion, Business Logic, and API Routing, significantly improving system maintainability and code extensibility.
- Implemented resilient error-handling and fallback mechanisms for third-party API outages and rate limiting.
- Developed dynamic Query Parameters supporting flexible analytics (Symbol, Resolution, Lookback Window), enhancing the API's utility for diverse financial use cases.
- Containerized the application environment using Docker, streamlining the CI/CD pipeline and ensuring consistent local-to-cloud deployment workflows.

DevLog - Task Management & API Platform

[csusb-denny/DevLog](#)

- Built a project and task management platform supporting user authentication, task assignment, and project tracking workflows.
- Developed REST APIs using FastAPI and JWT authentication to secure user access and protected resources.
- Designed PostgreSQL relational schemas to support efficient querying and maintain data integrity across project entities.
